PROFESSIONAL SUMMARY

B.Tech CSE, DTU (2026) | Full-stack engineer building GenAI-powered data pipelines, API integrations, and production systems — LangGraph agentic pipelines, REST APIs, Fintech simulations | 400+ DSA problems solved | Top 1% JEE Mains 2022.

EDUCATION

Degree / Certificate	Year	Institute / Board	CGPA / %
B.Tech (CSE)	2026	Delhi Technological University	7.52
CBSE Class XII (Science)	2021	RPS Sr Sec School, Mahendergarh	94%
CBSE Class X	2019	RPS Sr Sec School, Mahendergarh	88.8%

EXPERIENCE

Software Developer Intern — Sarv Tracking Solutions

Jun 2025 – Jul 2025

Backend Engineering | Node.js, Express.js, MongoDB, JWT, REST APIs

- Designed and built RESTful APIs handling 100% of GPS tracking requests, enabling real-time vehicle monitoring — applied agile sprint cycles with regular code reviews and unit test coverage.
- Optimised MongoDB queries via indexing and query rewriting, measurably reducing API response times and improving server throughput under concurrent load.
- Secured APIs with JWT-based authentication, input validation, and role-based access control, mitigating SQLi, XSS, and unauthorised access vulnerabilities.
- Collaborated directly with product and operations stakeholders to translate business requirements into backend API specifications.

PROJECTS

LogiExtract — AI Logistics Document Intelligence Platform

Python, FastAPI, LangGraph, Gemini 2.0 Flash, PostgreSQL, React, Docker

- Built an LLM-powered logistics document extraction agent using **LangGraph + LLaMA 3.3** — a 5-stage agentic pipeline (scope resolution → context compilation → schema routing → plan+execute → evidence delivery) extracting **19 structured fields** from Bills of Lading, Invoices, and Purchase Orders with confidence scoring and evidence grounding.
- Implemented a cross-document validation engine comparing extracted Invoice fields against Purchase Orders in real-time — auto-flagging mismatches on amount, party name, and PO reference with error/warning severity scoring, reducing manual compliance verification from hours to zero.
- Designed and deployed a full-stack production system with **FastAPI + PostgreSQL** backend, **React** frontend, and Docker containerisation — featuring drag-and-drop PDF upload, real-time extraction pipeline, Swagger API docs, and persistent extraction history with filter and delete controls.

UPI Payment Gateway Simulator | Fintech Payment Infrastructure

Aug 2025

Nodejs, Expressjs, MongoDB, Redis, REST APIs, Docker, JWT

- Built an end-to-end UPI transaction simulation backend - mirroring real-world payment network flows (merchant onboarding, QR generation, fund transfers, callbacks) directly analogous to VisaNet transaction processing.
- Implemented idempotency keys and distributed locking via Redis to guarantee exactly-once transaction processing under concurrent load — zero duplicate-credit scenarios recorded in stress tests.
- Designed a normalised MongoDB schema (merchants, wallets, transactions, settlements) with indexing on high-frequency query fields to optimise read performance across transaction lookups and settlement history.
- Containerised full stack (Nodejs+ MongoDB + Redis) with Docker Compose; enforced JWT-based merchant authentication and role-based API access control aligned with payment security standards.

TECHNICAL SKILLS

Languages: Java, Python, C++, C, JavaScript, SQL, HTML, CSS.

AI/ML & Agents: LangGraph, LLM integration (LLaMA 3.3/Groq), prompt engineering, document extraction agents, RAG concepts, confidence scoring.

AI/ML skills: ML fundamentals — classification, regression, model evaluation

Backend & APIs: Spring Boot, Node.js, Express.js, RESTful APIs, JWT, Microservices concepts, FastAPI, SQLAlchemy ORM.

Databases: MySQL, MongoDB, PostgreSQL- indexing, query optimisation, joins, window functions, DBMS, log analysis.

DevOps & Cloud: Docker, AWS, Git/GitHub, Render.

Frontend: React.js, responsive design.

CS Fundamentals: Data Structures & Algorithms, OOP, Operating Systems, Computer Networks, Agile/CI practices.

ACHIEVEMENTS & CERTIFICATIONS

- Solved 400+ DSA problems on LeetCode / GeeksForGeeks; completed Data Structures & Algorithms training at Coding Ninjas.
- Ranked top 1% in JEE Mains 2022 and qualified for JEE Advanced 2022 — demonstrates strong analytical and problem-solving ability.
